A Bank for All The People

There are some people in every community who think that banks were made for the rich. If you are one of the misinformed who have this thought, let us again emphasize the fact that ours is a bank for all the people. A deposit of \$1.00 receives the same welcome and the same courteous attention as a deposit of \$1,000.00 for this reason: Many a deposit of \$1.00 has grown into an account of \$1,000.00 or more and made itself worth while to the bank and its depositor. Begin to save now and stick to it.

Open an account to-day with a growing bank. and grow with it.

FEED FOR GRUNIIG HIGS IN

Exercise and Properly Proportioned Ration Important, as Well as Sanitary Conditions.

(By F. G. King, Agricultural Experiment Station, University of Missouri.)

The most successful farmers recognize and follow certain basic principles in farming and stock raising. These principles have been discovered and demonstrated by investigators on agricultural subjects, until they can be stated and discussed with a very certain degree of accuracy.

These facts are true especially in the case of the brood sow and her litter. The answers to a list of questions sent out to the most successful hog raisers of the state, showed that they recognized the principles that led

The brood sow, as an example, whether pregnant or suckling her pigs, is called upon to manufacture from common feeding stuff the bone and muscle for her growing young. In other words, she is a machine transforming one kind of material into a substance of the same material but of entirely different form. In doing this, the machinery-her bodymust be of the proper composition in order to furnish the finished product, the pig. with the necessary food ele-

Of prime importance to growing pigs and all other growing animals, is the question of bone and muscle-ferming toods. For up to the age of four months, the desire of the raiser is to grow rather than to fatten the pig.

Only the food containing an abundance of ash can furnish the nutrients required for the formation of bone; only foods containing an abundance of protein can furnish the natrients necessary for the formation of mus-So the growing animal must have a ration high in protein and ash

The fat and starchy feeds, and also protein, are used for the production of energy and heat and for laying on fat. In other words, the ash and protein feeds are used for making machinery and repairing old tissuet while the fats and starches are used for fuel to run the machinery and for storage of energy in the form of fat. As the object of the breeder is to grow rather than to fatten the pig or pregnant sow, the percentage of fall forming feed should not be so great as when the fattening period is reached.

In addition to the question of food nutrients which affect all growing animals, there are other factors affect ing the food of the brood sow, one of which is the laxative effect of the food given to the pregnant sow. Not only is she the provider of food, but her body is the guardian and protector of the unborn young. Any cause that may result in a disarrangement of her body will probably result in death or serious injury to the A food that constipates a pergnant sow will cause a weak, sickly litter. Not only must the food be laxative, but the sow must take enough exercise to insure the proper passage from her body of all refuse food material. This is such an important factor that it may mean the success or failure of the litter. For a sow that can not have, during pregnancy, a free passage of waste matter, can not produce a strong, healthy

The question of the bulk of the feed is often of great importance, especially in the feeding of brood sows. The appetite of an animal is not satisfied until the stomach is full. A food that is very concentrated, such as the grains, contains so much nutritive value that feeding so as to satisfy the hunger on such feeds results in the brood sow getting very fat. It is not desirable to have this occur. The only way to prevent it, and still sat isfy the appetite of the sow, is to feed a more bulky ration. This is easily accomplished during the grass seasor when pasture is available, but in win ter it requires the feeding of more than the very concentrated grains an feeding stuffs.

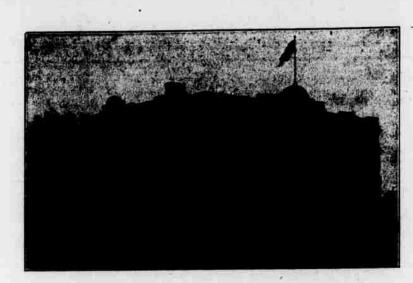

The accompanying table of the com position of the more common feeds on the farm represents the different properties desired for feeding stock. The muscle and bone forming elements are represented by the protein and ash contents, respectively, and he energy and fat producing elements by the starch and fat. The bulk is represented by the fiber and

Per	Cent	of C	ompe	sitio	n.:
Feed.	Asb	Protein	Starch or Sugar.	Fat	Fiber
Corn10.6		10.2	70.4	5.0	4.:
Milk \$7.2	0.7	3.5	4.9	3.7	2.50
Fresh Clover. 70.8	2.1	4.4	13.5	1.1	3
Fresh Alfalfa.71.8	2.7	4.8	12.3	1.0	7.4
Bluegrass65.1	2.8	4.1	17.6	1.3	9.1
Bran12.3 Middlings or	5.9	16.0	53.7	4.0	8.1
Shorts12.1	3.3	15 6	60.4	4.0	4.6
Linse'd Oilm'i 9.2 Tankage (quite		32.9	35.4	7.0	8.5
variable)	8.20	60.0		8.0	

In studying this table, the fact should be borne in mind that it is the proportion of ash and protein to starch and fat that determines the nutritive ratio, instead of the actual per cent of each nutrient.

While the laxative effect can not be reduced to figures, the relative power is well known. The feeds, excepting the green grasses, stand in the following relation to each other as to laxative effect, the more laxative being placed at the head of the list: Lin-

The Butler High School

Finest building and largest faculty in the county. In selecting a high school why not select the best? Why not select one which is able to serve you both while in school and when the course is completed?

We ask a thorough investigation. Become acquainted with our excellent equipment. Know of our superior advantages. See what we are able to do for you. Consider well the school question.

Butler Board of Education, **BUTLER, MISSOURI**

It will be noted that our principle food, corn, is lacking in protein, ash, bulk, and laxative effect, all of which are necessary for the best development in breeding and growing stock. ture of clover, alfalfa, and to a large however, are lacking in bulk for brood sows not having access to pasture or bulkier feeds.

for the brood sow and her litter. It is almost impossible to keep in good condition the digestive and reproducstock that do not have sufficient exercise. It not only tends to cause them to fatten, but it also leaves the digestive tract closed, and leads to constipation and other disarrangements of the system, which, occurring in the pregnant sow, cause weak and sickly litters to be farrowed. Ordinarily it is no trouble to get sows or pigs to take sufficient exercise, except in very bad weather, especially if a winter pasture such as wheat or rye is provided. But if a sow is sluggish and refuses to take sufficient exercise, some means should be resorted to to compel her to.

Agriculture for Women.

One of the new courses of study offered by the Missouri College of Agriculture is a four years' course for women, leading to the degree of Bachelor of Science in Agriculture. This course is intended to give a women, not only a knowledge of Home Economics, but a thorough training in those farm practices in which women are particularly interested. The course includes farm crops and soils, dairying, botany, gardening, care of sides the usual studies that have heretofore been included in the regular Marrian Marstellar and Page Harper. home economics course.

It is expected that this course will prove popular with a large class of young women who intend to spend Harper health and happiness in their their lives on farms or in teaching in new home. connection with agricultural schools. It is a well balanced course, affording wide range of studies from which students may elect work outside of the Agricultural and Home Economics

WANTED - Experienced farmer, es permanent work on farm.

A "Good-Bye" Party.

August 2, 1911. - The neighbors and

friends of Mrs. T. L. Harper marched enmasse to the old homestead farm, This defect, however, can be easily five miles southeast of Butler, with remedied in summer by a good pas- baskets filled to overflowing with every production the mind could conby the use of other feeds in connect ceive. Twenty-nine years have Mr. tion with corn, such as leguminous and Mrs. Harper owned and lived on hay, milk, bran, oil meal, and shorts their farm endearing themselves to or tankage. The last three of these, the hearts of all, year by year, rearing their family of stalwart sons and sweet young daughters in the midst Another factor that often means of the loving friends gathered there success or failure is that of exercise to bid them, not farewell, but a "sweet good-bye," having sold their farm to two of their sons-girls, they tive organs of growing and breeding are batchelors, too-intending to move to Butler, together with their two daughters and youngest son. The family at home to greet their friends consisted of Mr. and Mrs. T. L. Harper, Elias, Kirb, Holl and Leslie, their sons, and Ladine and Margerett, their daughters.

The guests present were: Mr. and Mrs. Jim Marstellar, Mr. and Mrs. J. S. Wolfe, Mr. and Mrs. Will Deweese, Mr. and Mrs. Warren Harrison, Mr. and Mrs. Elias Harper, Mr. and Mrs. Glenn Deweese, Mr. and Mrs. Boone Smythson, Mr. and Mrs. Harry Traver, Mr. and Mrs. W. M. Rice, Mr. and Mrs. J. O. Rogers, Mr. and Mrs. Jim Grow, Mrs. Jim Walker, Mrs. Dick Warren, Mrs. L. F. Vandruff, Mrs. Tom Bottoms, Mrs. Jim Harrison; Misses Anna Bentley, Ada Cooper, Kate Walker, Marvel Marstellar, Ada and Marie Deweese, Nadine and Fannie Bottoms, Lola and Hazel Rice, Marie, Hazel and Dora Wolfe; Ruth and Maybelle Vandruff; Faye, Susie, Fern and Dot Harper; Amy Grow; Messrs. Harvey Rogers, Hugh Lacflowering plants and fruit culture, be- course, Harvey and Herman Wolf, Leland Grow, Wesley Vandruff,

There were 55 present and others) circumstances preventing their coming) who join in wishing Mr. and Mrs.

Circular No. 48, "The Plastered or Gurier Silo" and Circular No. 49, 'The Reinforced Concrete Silo."

The Gurler sile is especially ads

there is still a supply of native lumber. It is cheap, fully as lasting as a wool silo, and preserves its contents as well as any more expensive structure. The reinforced concrete silo is built of solid concrete with iron rods or strands of wire running through the walls to prevent cracking. It is adapted to any section of the country where sand and gravel or crushed rock, may be obtained and on account of its great durability, it is probably the cheapest of all silos in the long

Anyone desiring information in regard to the details of building either the plastered or the solid concrete sile should write for these bulletins. They may be obtained free of charge by addressing F. B. Mumbord, Director, Columbia, Missouri.

Old sofas, cloth-covered chairs and all cloth-covered furniture can be made to look like new by painting the cloth with a hot solu-tion of PUTNAM FADELESS DYE.

GOOD NEWS.

Many Butler Readers Have Heard It and Profited Thereby.

"Good news travels fast," and the thousands of bad back sufferers in Butler are glad to learn that prompt relief is within their reach. Many a lame, weak and aching back is bad no more, thanks to Doan's Kidney Pills. Our citizens are telling the good news of their experience with the Old Quaker Remedy. Here is an example worth reading:

J. C. Reavis, High St., Butler, Mo., says: "An almost constant backache caused me much misery. My kidneys were badly disordered and the kidney secretions passed too frequently. Learning of Doan's Kidney Pills, procured a supply at Clay's Drug Store and I had used them only a short time before I was relieved."

On Nov. 30, 1908, Mr. Reavis confirmed the above statement and added: The Agricultural Experiment Station at Columbia, Mo., has just issued two new silo bulletins. They are:

Circular No. 48. 'The Plantana' order.'' I have been in excellent health dur-
